

Weekly Report

1 Done

1.1 Project

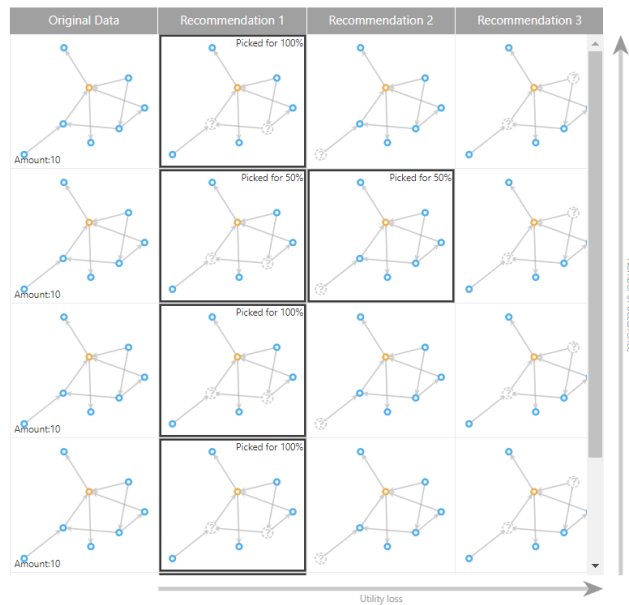

- Writing:

<https://www.overleaf.com/read/ynbpgxjsngfy>

Update design requirements and move to section 5 (interface design).

- Coding:

Solution Recommendation View

Waiting for backend.

- Discussion

I introduced requirements to Rusheng and Yanling.

1.2 Event Sequence Prediction

I asked Chuan Wang that if I can be involved in her project about event sequence datasets. She agreed and we talked about the project.

- This project is about explain how does RNN model work on event sequence data. It will help users to solve questions, like “which events play a significant role to the classification”.
- Users will be allowed to make assumptions and verify them.
- She can cover backend coding and I will focus on frontend.
- For this project, I rendered the result from T-sne by deck.gl.
- In next week, I will search related design on this topic.
- I will prioritize privacy project.
